BUFFERS & TAB MANAGEMENT

SHIFT + h / l	Prev / next open buffer (<S-h> / <S-l>)
[b /]b	Navigate to previous / next buffer in tabline
<leader> + bb / `	Switch to other (last visited) buffer
<leader> + bd	Delete current buffer (Snacks bufdelete)
<leader> + bo	Delete all other buffers except active
<leader> + bp	Toggle pinned status of current buffer
<leader> + bP	Delete all non-pinned open buffers
<leader> + bj	Pick buffer interactively by badge letter
<leader><tab> + new / d	Open new tab (:tabnew) / Close tab
<leader><tab> +] / [	Navigate to next / previous tab page
<leader><tab> + o / l	Close other tabs / Jump to last tab

WINDOWS & SPLIT MANAGEMENT

CTRL

+

h

/

j

/

k

/

l

Focus left / lower / upper / right split

<leader>

+

-

Split horizontally (new window below)

<leader>

+

|

Split vertically (new window right)

<leader>

+

wd

Close active split window (<C-w>c)

<leader>

+

wm

/

uZ

Toggle maximize / zoom active split

CTRL

+

↑

/

↓

Resize split: increase / decrease height

CTRL

+

←

/

→

Resize split: decrease / increase width

CTRL

+

W

+

=

Equalize dimensions across all open splits

CTRL

+

W

+

HJKL

Move active split to far left / bot / top / right

CTRL

+

W

+

s

/

v

Standard horizontal / vertical window split

CTRL

+

W

+

SPACE

Which-key Window Hydra mode (resize)

LSP CODE INTELLIGENCE

gd

Goto definition of symbol under cursor

gD

Goto declaration of symbol under cursor

gr

Find all references of symbol in project

gI

Goto implementation of interface / symbol

gy

Goto type definition of symbol

K

Display hover documentation & signature

gK

/

CTRL

+

K

Display signature help (Normal / Insert)

<leader>

+

ca

Open LSP code actions menu (Normal & Visual)

<leader>

+

cr

Smart rename symbol everywhere in project

<leader>

+

cR

Smart rename file and update imports

<leader>

+

cf

Format active buffer or visual selection

UI TOGGLES & SETTINGS (<leader>u)

<leader>

+

uf

/

uF

Toggle auto-format (global / buffer)

<leader>

+

ud

Toggle inline diagnostic virtual text

<leader>

+

uL

/

uL

Toggle line numbers / relative line numbers

<leader>

+

us

Toggle spell checking on / off

<leader>

+

uw

Toggle soft line wrapping on / off

<leader>

+

uz

Toggle Zen mode (distraction-free writing)

<leader>

+

uh

Toggle LSP inlay parameter hints

<leader>

+

uT

Toggle Treesitter syntax highlighting

<leader>

+

ub

Toggle background colorscheme dark / light

<leader>

+

uG

Toggle Git signs gutter column

<leader>

+

un

Dismiss all active floating notifications

DIAGNOSTICS, QUICKFIX & TROUBLE

<leader>

+

cd

Display line diagnostics in hover window

]d

/

[d

Jump to next / previous diagnostic issue

]e

/

[e

Jump to next / previous diagnostic error

]w

/

[w

Jump to next / previous diagnostic warning

<leader>

+

xx

Toggle Trouble workspace diagnostics panel

<leader>

+

xX

Toggle Trouble buffer-only diagnostics

<leader>

+

cs

Toggle Trouble document symbols outline

<leader>

+

cS

Toggle Trouble LSP references & definitions

]q

/

[q

Jump to next / previous Trouble / quickfix item

]t

/

[t

Jump to next / previous TODO comment

<leader>

+

xt

/

xT

Todo comments in Trouble (All / Fix)

SEARCH, FIND & PICKERS (<leader>f/s)

<leader>

+

<space>

Fuzzy find files in project root

<leader>

+

ff

/

fF

Find files (project root / cwd)

<leader>

+

fr

/

fR

Browse recent files (all / cwd)

<leader>

+

fn

Create new empty file buffer (:enew)

<leader>

+

e

/

fe

Toggle file explorer tree (Neo-Tree / Snacks)

<leader>

+

/

Live grep search across project root

<leader>

+

sg

/

sG

Live grep search (project root / cwd)

<leader>

+

sw

/

sW

Search word under cursor (project / cwd)

<leader>

+

sb

Fuzzy search lines in current buffer

<leader>

+

sk

Search interactive keymaps list (Which-Key)

<leader>

+

sr

Search and replace across project (Grug-Far)

GIT, TERMINAL & SESSIONS

<leader>

+

gg

/

gG

Open Lazygit terminal UI (Root Dir / cwd)

]h

/

[h

Jump to next / previous Git change hunk

<leader>

+

ghs

/

ghr

Stage current Git hunk / Reset (revert) hunk

<leader>

+

ghu

Undo last staged Git hunk

<leader>

+

ghp

Preview Git hunk diff inline

<leader>

+

ghb

/

ghB

View Git blame for current line / buffer

CTRL

+

/

Toggle floating terminal in project root

<leader>

+

fT

Toggle floating terminal in cwd

CTRL

+

\

+

CTRL

+

N

Escape terminal mode back to normal

<leader>

+

.

/

S

Toggle scratchpad buffer / Select scratchpad

<leader>

+

qs

/

qL

Restore project session / Restore last session

<leader>

+

qq

Save all modified files and quit LazyVim (:qa)
